Place of birth: 08/09/1968 Parma (PR) Italy

School: University of Pavia faculty of Medicine

Qualification: Degree in Dentistry and Dental Prosthesis.

Curriculum Vitae:

Carrier

I graduated in 2006 with a thesis in oral surgery called "jaw cysts, diagnosis and treatment".

Before that I have been a Dental Technician for twelve years with my dental technician laboratory and over the last five years of that period, I was also a student of dentistry.

I opened my first dental surgery in Barbania in 2007 starting to practice all the dental specialties with particular dedication on advanced oral surgery, guided bone regeneration, implantology, with continuing parallel research activities.

All the dental procedures carried out in my surgery are performed with the aid of a magnifying optical system and the use of autologous platelet concentrates and their growth factor is routine in all surgical procedures.

Since 2006 I have attended about 100 postgraduate up dating courses and congress in all branches and I am qualified to use a defibrillator in the case of medical emergency (having attended a BLS certification course). I deal to esthetic medicine of the lower third of the face, using volumizing resorbable fillers to correct blemishes directly linked to the mimic facial smile.

In 2008 I have been assistant for six month in the main Dr. Francesco Martelli's microdentistry clinic in Florence.

In 2011 I became an active member of AIOM (Italian Academy of Microscopic Dentistry) and speaker at the National Congress for the same. In the same year I was speaker at the National congress of Italian Odontostomatology Cenacle and the Italian general dentistry association.

In 2012 I was the only not University Professor speaker at the National Congress of SIDCO (Italian society of oral surgery). In the same year I have been speaker at the National Congress of Beneath Academy.

In 2013 I held with Dr. Massimo Mazza, my first course of microscopic dentistry for the Odontostomatology Cenacle of Bologna. In the same year I have founded with Dr. Massimo Mazza the Microscopic Dental Club, international scientific association for spread and knowledge of microscopic dentistry.
